Summary

Management Information Systems student with hands-on experience in requirements analysis, process modeling, system analysis, and software development through academic projects. Able to translate requirements into structured workflows, business rules, system behavior, and validation scenarios, with a technical foundation in SQL, REST APIs, databases, and software development. Seeking a Business Analyst Internship to apply analytical and technical skills in real-world software projects.

Projects

🔗 LearnUp – AI-Powered English Learning Platform

Business Analysis Case Study | Requirements Analysis, Process Modeling, Draw.io, SQL, REST API

- Analyzed and formalized requirements across **3 user roles and 9 Use Cases**, covering course management, course approval, enrollment, learning progress, quizzes, and AI-assisted learning.
- Documented **8 Functional Requirements, 6 Non-Functional Requirements, 7 Business Rules, 10 User Stories, and 18 Acceptance Criteria**; modeled system workflows using **Process, Activity, Use Case, and ERD diagrams**.
- Built a **Requirement Traceability Matrix (RTM)** linking requirements with Use Cases, User Stories, Business Rules, Acceptance Criteria, and validation evidence.
- Mapped requirements to **REST APIs, SQL data entities, Authentication, Authorization, and Ownership rules**, and performed local **UAT-style validation** of implemented behavior.

🔗 E-Commerce Customer Churn & Retention Analysis | SQL, Power BI

- Analyzed **5,600+ customer records** to identify churn drivers, uncovering a **32.42% attrition rate** among customers in their first 6 months vs. **16.84% platform baseline**.
- Found that customers with service complaints churn at nearly **3x the rate** of those without (**31.67% vs. 10.93%**), highlighting service friction as a key retention lever.
- Formulated and tested **3 data-driven hypotheses** on churn behavior (lifecycle risk, order recency, multi-variable risk profiling) using SQL for data cleaning, feature engineering, and exploratory analysis.
- Delivered **4 strategic recommendations** (onboarding revamp, complaint SLA tracking, high-risk customer scoring) directly tied to analytical findings.

Skills

Business Analysis : Requirements Analysis, Business Requirements, Functional Requirements, Non-Functional Requirements, Business Rules, Stakeholder Analysis, Process Analysis

Requirements & Validation : Use Cases, User Stories, Acceptance Criteria, Requirement Traceability Matrix (RTM), UAT-style Validation, Test Scenarios

Modeling : Process Flow, Use Case Diagram, Activity Diagram, ERD, System Flow

Tools : Draw.io, Git, GitHub, VS Code

Database & Technical : SQL, SQL Server, REST API, Java, Spring Boot, React, C#, C++

Languages : Vietnamese (Native), English

Education

Ho Chi Minh City Open University

2023 – 2027

Bachelor of Management Information Systems
